Colitis nerviosa pediatria pdf

Colitis nerviosa en pediatria.

Irritable bowel syndrome is a common intestinal problem that can cause cramps, gas, swelling, diarrhea and pregnant. Some foods can trigger the symptoms of irritable colon syndrome. Anxiety, stress and infections can also cause. Pain or discomfort that improves after moving belly. Pain or discomfort with the frequency changes with which one person needs to go to the bathroom. Pain or together the discomfort with changes in the appearance of excrement. Some children suffer from distance and droppings become difficult (and difficult to eliminate). Others suffer from diarrhea There are no specific tests or studies to diagnose irritable bowel syndrome. It usually comes diagnosed to ask questions about symptoms and a physical examination. Changes in feeding changes in lifestyle therapy and strategies to deal with difficulties if it is not treated, irritable bowel syndrome can affect the quality of your child of life, it will be better for consultation to participate and control this condition To help the child maintain an active and healthy life. Colite is an intestinal inflammatory disease that affects the gastrointestinal tract. The design occurs when the coating of the rectum or the colon is inflamed. As a result, Tiny ulcers appear and diffusion upwards. The disease causes the intestine to empty frequent and move its content quickly. Patients Excences bleeding and secretion of mucus. While colitis can affect both sexes and all ages, many people are diagnoseded of ages between 10 to 40. After 50, men are more likely to get colitis. Although the main cause of the disease is unknown, the researchers believe that the immune system has an abnormal response to the colon. They also think that your gene and the environment cause can colitis. A, the gravity of symptoms varies from person to person. The most common symptoms include bloody feces, abdominal pain, diarrhea, fever, weight loss, rectal pain, malnutrition, and strong abdominal sounds. Colite is a chronic condition. Treatment involves surgery and pharmacological therapy. The main objective is to reduce inflammation and provide pain relief. It is normal for all children to evil the stomach from time to time. But there are children who feel this pain all the time. They are tired of notice and also as if they were to vomit. Some of these children can have what is known as an intestinal inflammatory disease. This disease makes parts of blond intestine and inflamed. It is a chronic affection, which means that lasts long or going and is constantly. What are the different types of inflammatory intestinal disease? There are two types of intestinal inflammatory disease: Crohn's disease and ulcerative colitis. Whether causing inflammation and often digestive section ultrasound. The ultrasound are tears or injuries in the intestinal coating that can cause pain and / or bleeding. What happens in intestinal inflammatory disease? Crohn's disease makes all the layers of the intestinal wall badly, swell and inflamed. It can affect any part of the digestive tract, including the mouth, the esophagus, the stomach, the small intestine, crassus and the anus. Crohn's disease difference, only the interior coating of the whole colon is inflamed on ulcerative colitis, or from this, and the rectum. Sometimes, the rectum is interested. Whether in Crohn's disease and ulcerative colitis, inflammation can last many years, to reappear more and more times. What are the symptoms of intestinal inflammatory disease? Most frequent symptoms of intestinal inflammatory disease are the pain of belly (sometimes with cramps) and diarrhea. Other symptoms may include the following: blood Toilet, in Hygiyl paper or paid fever Payment Energy Pile of weight Inflammatory intestinal disease can cause other problems, such as eruptions, eye problems, joint pain, arthritis and hepatic problems (in the liver). What to develop an intestinal inflammatory disease? Inflammatory intestinal disease is given by families. But not all people who suffer from them have relatives who have suffered. Intestinal inflammatory diseases can occur to any age, but is usually diagnosed in adolescents and young adults. What do doctors do? If one of the symptoms of an intestinal inflammatory disease is presented, you should go to your doctor. He will have to check if and ask questions about any symptoms or problem you can have, on the health status you have had so far, your family's health, any medication takes, allergies and other topics related to your health. It is possible that the doctor reports to do blood tests, feces (cousins), X-rays and other tests. How is intestinal inflammatory disease? If a person suffers from an intestinal inflammatory disease, it is possible that the doctor recommends a diet with a few fibers, fat and grease. You can also prescribe medications to reduce inflammation and to help prevent infections. On some occasions, you need to operate. NIA ± OS with ulcerative colitis can be treated if there (or extracted) the intestine extravorped. Crohn's disease does not care, but the interested parts of interested parts of the intestine can help. How is life for a child with an intestinal inflammatory disease? Inflammatory intestinal disease is not a disease that children to overcome with age. In any case, many children have long periods, sometimes up to this year, in those who do not show symptoms. Some children who suffer from this disease lose many kind days. Those who have painful withdrawals, frequent diarrhea and nausea, have a great time being sitting during the lessons or buses to go and return to school. Some of those who are not getting the nutrients they need can have to go to the hospital so that they are administered for intravenous injection (VI). In some cases, children suffering from this disease grow or mature more slowly than normal and can receive growth hormones. Friends and companies levels should deal with children with this disease, as for others. It is nice to be understanding and being willing to listen when someone suffering from an intestinal inflammatory disease wants to talk. The simple fact of talking about him sometimes can help children are much better about their situation. The best thing for children suffering from an intestinal inflammatory disease is to take care, exercise, take their drugs and eat foods that will make them grow strong. If the intestinal inflammatory disease is well managed, children with this soil can lead a normal life. Bitton S, Markowitz JF. Ulcerous colitis in children and adolescents. In: WYLLIE R, HYAMS JS, KAY M, EDS. Gastrointestinal pediatric and liver diseases. 6 A ° Ed. Philadelphia, PA: Elsevier; 2021: Chap 43.stein King, Baldassan Rn. Intestinal inflammatory disease. In: Kliegman RM, San Geme JW, Blum NJ, Shah SS, Tasker RC, Wilson km, EDS. Dyscon manual of pediatrics. 21 A Ed. Philadelphia, PA: Elsevier; 2020: Chap 362. Irritable colon syndrome is a disease that usually affects children and adults. It is characterized by presenting abdominal pain and alterations of the intestinal rhythm, generating diarrhea or pregnancy. It is considered as a chronic disorder with recurrences, that is that comes affection with symptoms, as well as phases without discomfort. Then, in International, we tell you a little more about causes and symptoms in children. Causes Infit It was not possible to define the specific causes. However, some investigations indicate that it can be due to the following factors: genetic conditions. Body reaction to some foods like milk, chocolate, caffeine, fast food, fatty, spicy or very seasoned food. Factors of emotional problems and problems such as family problems, moving, trauma, among other difficult situations for children. Because the colon ribs and the brain are connected, stress and conflict situations can have an impact on the functioning of the colon; Be accelerate or slow your rhythm. The symptoms usually experience NIA ± OS The following symptoms: diarrhea and pregnancy: diarrhea and premiere are the most common syndoms of irritable colon syndrome. © This is because the central nervous system fails to regulate the bowel rhythm correctly. Flatulence: Flatulence is another of the most common symptoms. It can cause abdominal swelling and discomfort. The discomfort will generally appear at any time, and are not necessarily associated with meals. They can last hours or minutes. Nausea and vomiting: nausea and vomiting usually appear from irregularity and defecation intensity. Many children will prefer not to eat to avoid the inconvenience, this would only aggravate the symptoms. Remember that it is important to maintain a healthy diet.
