How to see ring camera on echo show 8

Since both Ring Doorbell and Echo Show are made by Amazon, it's common for smart homes to have both. With integration being an essential part of an effective smart home, users will want to know if they can view their Ring doorbell feed on their Echo Show. How to show the Ring Doorbell on an Echo Show? Enable the Ring skill in the Alexa app, and link the devices. To see a Ring doorbell camera feed, say the Echo device's wake word, then say "show my [name of your Ring doorbell]." When someone rings the doorbell, say "answer [name of your Ring doorbell]" to view and talk. In the guide below, there are detailed instructions on how to enable the Ring skill, how to link your devices, and what voice commands you can use to control your video doorbell with your Echo Show. Viewing Ring Doorbell on Echo Show All versions of Ring doorbell are compatible with Echo Show and easy to integrate. Echo Show (Click Image to View Amazon) Once the two devices are linked in the Alexa app, you can: View the camera's live stream any time.Talk and listen through the camera any time."Answer" the door when someone rings the bell.View the most recent recorded video if you have a Ring Protect subscription plan.Control the playback of the most recent recorded video if you have a Ring Protect subscription plan. Enabling the Ring Skill Before you can link your devices, you need to enable the Ring skill in the Alexa app. Open the Alexa app on your phone or tablet. Tap the three lines in the top-right corner. Select "Skills & Games".Tap on the search icon.Type "Ring" in the search box and press search.Select the Ring skill.Tap the "Enable To Use" button. Enter your Ring log-in info, and press the "Sign in" button.Tap "Discover Devices".Your Ring doorbell will automatically connect. Linking Ring Doorbell and Echo Show If you have previously enabled the Ring skill on your Alexa app or your Ring doorbell doesn't automatically connect, simply say "[Wake word], discover my devices" to any of your Echo devices. This voice command will prompt Alexa to automatically search for and connect any compatible devices in your home as long as they are on the same Wi-Fi network. Voice Commands for Live View For all the Alexa voice commands listed below, make sure to say your device's chosen wake word before the command. To view your doorbell camera's live feed without 2-way audio, say "show my [Ring doorbell name]". To view the live feed with 2-way audio, say "talk to [Ring doorbell name]". To answer your doorbell with 2-way audio when it rings, say "answer [Ring doorbell name]". You can end the live feed and audio any time by saying one of the following commands: "Hide the [Ring doorbell name].""Go home.""Stop." Voice Commands for Recorded Video To view the last recorded video, say "show me the last activity from [Ring doorbell name]." When a recorded video is playing on your Echo Show, you can control playback with the following commands: "Fast-forward __ seconds/minutes.""Rewind __ seconds/minutes.""Pause.""Play." Keep in mind that you can only view recorded videos if you have one of the two Ring Protect subscription plans. Click here for more info about the plans. Curious how long the Ring records? Check out the full details. More Compatibility Amazon Echo devices and Ring doorbells have even more options for integration with each other and with other smart home products. Ring Doorbell Chime and Notifications You can use your Echo Show or any other Echo device as a doorbell chime and to receive motion alerts. Here are the steps to set up your Echo to chime and receive motion alerts: In the Alexa app, click on "Devices".Select the Echo device that you want to announce your Ring doorbell events. If you want more than one Echo device to announce, you need to enable announcements on each device separately in the Alexa app. Tap "Communications".Tap "Announcements".Slide the "Enabled" bar on. Go back to "Devices".Select "All Devices".Select your Ring doorbell.Turn on the "Doorbell Press" option. Other Echo Devices The only two Echo devices that have screens are Echo Show and Echo Spot.The main difference between the two devices is the shape and size, with the Spot being much smaller and kind of shaped like an eight ball. Ring Doorbell works exactly the same way with the Echo Spot as it does with the Show. If you have an Echo device without a screen such as an Echo Dot, you obviously cannot view your doorbell's live feed on it, but you can talk and listen through the doorbell. Viewing Ring Doorbell on Your Smart TV You can also view your Ring doorbell's camera feed and talk through it on a Fire TV or a TV with a Fire Stick. The same voice commands that work with the Echo Show and Spot work on your Fire TV. Ring doorbells are also compatible with some Samsung smart TVs. Je kunt eenvoudig je Ring-apparaten koppelen aan je door Alexa ondersteunde apparaat, zoals Echo Show, Fire TV en Fire-tablets. Hiervoor moet je Ring toevoegen als Skill in de Alexa-app. Zo kun je het Ring-apparaat of de Ring-apparaten bedienen met spraakopdrachten en livevideo's bekijken als je een Echo Show of Echo Spot hebt. Eerst moet je de Alexa-app van Amazon downloaden (tenzij je die al hebt). Open Alexa. Rechtsonder in de hoek zie je drie horizontale streepjes. Tik hierop. Tik in het menu dat wordt weergegeven op Skills & Games. Op het volgende scherm tik je op het vergrootglas en zoek je Ring op in het zoekvak. Als je Ring hebt gevonden, tik je op 'inschakelen'. Vervolgens vraagt Alexa of je wilt inloggen op je Ring-account. Als je dit doet, wordt je Ring-account aan je Alexa-account gekoppeld. Nadat je je hebt aangemeld, krijg je de vraag om naar apparaten te zoeken. Tik op Discover Devices (apparaten detecteren). Al je Ring-apparaten worden weergegeven en worden automatisch verbonden met Alexa. Als je niet wilt dat Alexa wordt geïntegreerd met een bepaald Ring-apparaat, tik je aan de rechterkant op 'Vergeten'. Als geen van je Ring-apparaten automatisch wordt weergegeven, kun je: Een commando geven, "Alexa, discover my devices." Tik op Discover devices (ontdek apparaten). Alexa gebruiken met Ring-apparaten De Ring Skill verbindt elke Ring Video Doorbell of beveiligingscamera met je Echo Show, Echo Spot, Echo-speakers, Fire TV's of Fire-tablets. Alexa kan een nieuwe video starten of deelnemen aan een bestaande video. Zeg "Alexa, show my front door" om livebeeld van je huis op een Echo Show te bekijken. Als je de beelden niet meer wilt bekijken, zeg je gewoon "Alexa, hide my front door." Hier wordt 'woordeur' als voorbeeld gebruikt. Je kunt dit vervangen door de naam die je aan je het Ring-apparaat hebt gegeven (zoals achtertuin, zijdeur, garage, enzovoort). Klik hier voor meer informatie over het instellen van tweerichtingscommunicatie via je Amazon Echo-apparaat met een Ring Video Doorbell of beveiligingscamera. Automatisch livebeeld Met deze optie kun je automatisch zien wie er voor je deur staat wanneer iemand op de deurbel drukt. Let op: Mogelijk moet je de Ring Skill opnieuw installeren om automatisch livebeeld te kunnen zien. Hier volgen nog een paar dingen die je kunt zeggen om het livebeeld te bekijken of te verbergen: "Alexa, show [Naam Ring-apparaat]." "Alexa, hide [Naam Ring-apparaat]." "Alexa, stop." "Alexa, go home." Klik op deze link voor meer informatie over het instellen van deurbelmeldingen. Deurbelmeldingen ontvangen op je Alexa-apparaatJe kunt eenvoudig de deurbelfunctie op je Alexa-apparaat inschakelen. Volg de onderstaande instructies: Download de nieuwste Alexa-app. Tik op het tabblad Devices (Apparaten) rechtsonder in het scherm. Tik op Deurbellen. Tik op de videodeurbel waarover je een melding wilt ontvangen. Schakel de optie Doorbell press in. Let op: voor elk apparaat met Alexa moet Communication and Announcements ingeschakeld staan, en Do Not Disturb moet zijn uitgeschakeld. Opgenomen video's bekijkenAls je een Alexa-spraakopdracht wilt gebruiken om de meest recente opgenomen video te bekijken, zeg je het volgende: Alexa, show me the last activity from [Ring Device Name]. Alexa, show the most recent event from [Ring Device Name]. Alexa, fast-forward 10 seconds. Alexa, fast-forward 1 minute. Alexa, rewind 10 seconds. Alexa, rewind 1 minute. Alexa, pause. Alexa, play. Let op: als je een opgenomen video wilt bekijken, moet je een abonnement hebben op Ring Protect. Als het lang duurt voordat er verbinding wordt gemaakt, kun je het wifisignaal versterken met behulp van een Ring Chime Pro. Let op: in sommige gevallen heeft een Ring-apparaat wat meer tijd nodig om op te starten. Als de batterij bijna leeg is, kan het 30 seconden of langer duren om verbinding te maken met Ring. Heb je meer hulp nodig met Alexa? Klik hier om naar het Amazon-helpcentrum voor Alexa te gaan. »Sorry to interrupt!CSS Error Our homes are smarter and more efficient than ever, with tons of devices around the house that can all be controlled using your voice. Last year, Amazon released dozens of new products and Alexa features, including our new favorite Amazon Echo smart speaker. But other developers have been innovating, too: Last year alone, popular camera developer Wyze released the Wyze Cam v3, the Wyze Cam Outdoor, the Wyze Thermostat, the Wyze Video Doorbell, the Wyze Robot Vacuum, the Wyze Sprinkler Controller and -- incredibly enough -- even more.Alexa has long ruled the roost when it comes to smart home integration and this year Amazon's voice assistant is bringing even more impressive integrations to your countertop. This list of the best Alexa devices is updated periodically, so check back often for the most up-to-date recommendations. Chris Monroe/CNET ED I T O R S ' C H O I C E Oct 2020 Amazon's third-gen Echo Dot with Clock was our previous favorite Alexa speaker, but with this year's new product line, the flagship fourth-generation Echo speaker gets the nod. At \$100, the spheroidal speaker is more expensive than the \$50 fourth-generation Echo Dot, but the improvements in sound quality and some intriguing smart home features justify the additional cost. This smart device's shape sets Amazon's newer Echo speaker apart. Where the third-gen Echo offered a barely noticeable sound quality improvement over its predecessor, the ball-shaped fourth-gen version has noticeably better audio output, including respectable bass for a speaker in its price range. On the smart home front, the fourth-gen Echo also gets a built-in Zigbee receiver, carrying over a feature from the now-defunct Amazon Echo Plus. The Zigbee receiver lets the new Echo function as a smart home connectivity point for compatible light bulbs, plugs, and other Zigbee-based accessories. That means you can use the Echo itself as a hub, without the need for an additional piece of hardware to get those devices online. The newest Echo Dot has the same shape as the new Echo speaker, but the improvement over the third-gen Echo Dot isn't very apparent. It also costs \$50, where you can regularly find the third-generation Echo Dot still on sale for \$30 or less. Read our Amazon Echo (2020) review. Wyze ED I T O R S ' C H O I C E Oct 2019 The third-gen Wyze Cam, like its earlier iterations, costs an incredibly low \$20, but this smart home device is one of our favorite cameras overall, despite the price. It comes with weatherproof housing, sharper night vision than its predecessor, a wider field of view, a loud siren and more -- including 14-day video clip storage and a built-in microSD card slot for local storage.If you have an Echo Show smart display, you can also throw the Wyze Cam's feed onto the screen with a simple voice command.Note that the Wyze Cam is currently sold out, but the company expects to have more in stock later this week. Read our Wyze Cam (2020) review. Lauren Routt/CNET Ring's \$150 Peephole Cam is a unique product for the Amazon-owned company. Rather than mounting to a door frame or somewhere else to the side of your door, the Peephole Cam replaces a traditional peephole.That means this Amazon Alexa compatible device is perfect for folks living in apartments who want a smart doorbell, but don't want to deal with a hardwired device -- or otherwise messing up a door frame for the installation. None of Ring's main competitors offer this sort of seamless solution for apartment-dwellers, making this doorbell particularly innovative alongside the other devices available today. Not only that, but the Peephole Cam has the easiest installation of any doorbell I've tested to date. It also has advanced Alexa integration. Yes, you can pull up the live feed on an Amazon smart display, but you can also chat with whoever's at your door via the built-in speaker on the smart display with the command, "Alexa, answer the front door."That two-way talk feature via an Alexa smart display is unique to Ring devices.Editor's note, Dec. 14: Ring has been called out for its partnership with local police departments in the US, leading privacy advocates to express concern about the data Ring shares with law enforcement and how they use that information. In December 2019, thousands of Ring users' personal information was exposed, leading us to stop recommending Ring products.Ring has since updated its security policies, from offering customers a Control Center dashboard to more easily access privacy and security settings to requiring two-factor authentication. We have resumed recommending Ring's products with this caveat: If you have concerns about Ring's privacy policies, make sure to familiarize yourself with its privacy statement. You can read more about how we factor Ring's privacy policies into our recommendations here. Read our Ring Peephole Cam review. Chris Monroe/CNET The Ecobee Smart Thermostat is a \$250 connected thermostat with Alexa compatibility. This model replaces the Ecobee4 smart thermostat, but has a lot of the same great features.Control your Smart Thermostat via the Ecobee app and use Alexa, Google Assistant and Siri voice commands to adjust the temp of your smart thermostat. It's Alexa's voice control that really stands out here, though, since the thermostat itself has a built-in Alexa smart speaker.That means you don't need a separate Echo device -- just connect your thermostat, enable the speaker and start asking Alexa questions. Read our Ecobee SmartThermostat review. Chris Monroe/CNET The Amazon Echo Show 8 is Amazon's latest smart display. For \$110, you get an eight-inch screen with the best resolution of any Echo Show yet, a camera shutter and all the smarts of previous Amazon smart displays.The Echo Show 8 has a built-in Alexa speaker. That means you can use this smart display to ask your Alexa digital assistant to do your bidding, whether that be asking it to play music, relay the weather or just tell you a joke. And, since it's a smart display, it also offers advanced compatibility with Alexa-enabled security cameras.Ask Alexa to "answer the front door" when someone rings your Ring Peephole Cam and you can see the live feed on your Show 8 -- and actually talk to the person, straight from the smart display. Read our Amazon Echo Show 8 review. Chris Monroe/CNET ED I T O R S ' C H O I C E May 2020 August's Wi-Fi Smart Lock is a great smart lock. It retrofits to most standard deadbolts, so you don't have to deal with a complicated installation. The built-in Wi-Fi makes it possible to access and control your smart lock remotely via the Android or iOS app without needing an August Connect module.This product comes with an open/close sensor, too -- called DoorSense -- that attaches to the door where your Wi-Fi Smart Lock is installed. That way, the app can not only tell you whether the door is locked or unlocked, but also if the door is open or closed. The August Wi-Fi Smart Lock is an Alexa compatible device, so you can lock and unlock your door from an Alexa-enabled smart speaker using your voice. Read our August Wi-Fi Smart Lock review. Chris Monroe/CNET SimpliSafe is a solid DIY home security system with a ton of accessories, so you can scale the system up as needed. The starter kit costs \$160 for the hub, keypad, entry sensors and motion sensor. SimpliSafe also works with Alexa, so you can arm the system and check its status with simple voice commands.SimpliSafe doesn't require a contract, but monthly fees start at \$15 to access the app and go up to \$25 if you want professional monitoring. Read our SimpliSafe review. Tyler Lizenby/CNET The latest version of the Philips Hue White LED smart bulb works with ZigBee and Bluetooth. The addition of Bluetooth is significant for Philips Hue, because it means you don't need a Philips hub to get these smart bulbs to work.Instead, the smart bulbs connect directly to your phone -- and they work with Alexa voice commands. Ask Alexa to turn on the living room lights, or dim the dining room smart lights to 70%. Philips Hue White LEDs cost just \$15 each, meaning you don't have to dish out a ton of cash for these straightforward Alexa-enabled bulbs. Read our Philips Hue White LED article. Chris Monroe/CNET The TP-Link Kasa Smart Wi-Fi Plug Mini is a big name for a tiny smart plug that costs just \$12. A smart plug like this one connects via your Wi-Fi connection directly to a wall outlet and convert your nonsmart lamps, fans and other gadgets into smart devices.Use the TP-Link app to connect and control devices -- or enlist Amazon Alexa and use your voice. Say, "Alexa, turn on the reading lamp" to get the Plug Mini smart plug to control the devices connected to it with ease. Read our TP-Link Kasa Smart Wi-Fi Plug Mini review. Chris Monroe/CNET The Amazon Echo Flex is a tiny smart speaker that plugs directly into an outlet. For \$25, it offers all the smarts of Alexa, plus a USB port for additional modules -- like a motion detector and night light.As the name suggests, the Flex can fit many functions, helping to strengthen your home security and widen Alexa's range of hearing for when you need help in less central corners of your home.The addition of a motion sensor also means Alexa can create automations based on your movement, switching on lights when you enter a room or delivering your morning news when you sit down for breakfast. Read our Amazon Echo Flex review. Now playing: Watch this: The Amazon Echo Show 5 helps Alexa fit nicely on your... The Alexa landscape Amazon's voice assistant makes it easier to control the devices in your home, set timers and find out how long your commute to the office will take. But privacy has become an increasing concern as smart speakers and displays grow in popularity. Reports that Amazon keeps transcripts of your voice conversations, even after you've deleted the Alexa audio recordings, led to concerns over user privacy. Sen. Chris Coons, a Democrat from Delaware, wrote a letter to Amazon CEO Jeff Bezos seeking answers about Amazon's Alexa user data and how it's stored. Amazon has since introduced the "Alexa, delete everything I said today" feature. The tech giant says it's also working on new ways for customers to delete their transcripts. Amazon's latest smart display, the Echo Show 8 comes with a built-in camera shutter, unlike earlier Echo Show devices. Amazon isn't alone. Facebook, Google and other major tech companies have faced their own privacy issues, prompting questions about data usage. Fortunately Amazon and others appear to be working to win back our trust. Have these privacy concerns kept you from buying a voice assistant (Alexa or otherwise)? Weigh in in the comments section below. Still have questions? Read more about Alexa. More for your smart home
