Send file using messenger

How to send pdf file using messenger. How to send file using messenger mobile. How to send file in messenger using laptop. How to send file using messenger lite. Send file using messenger app. How to send file in messenger using android phone. How to send ms word file in messenger using laptop. How to send file using messenger in cp.

Sending files online is very necessary for all of us. Sending important files to your boss, or share your work and activity for your friends and present your projects to your professors. We can send by e-mail and other platforms through the use of our computers. But not all of us have access to computers and we are only based on our beloved smartphones. Although we can send files by e-mail with our phone but it's not the best way to send files, you need to ask your friend's mail before sending files. Not like the Messenger app, which is very accessible as for all people are connected to Facebook 24/7. You can reach your friend a few touches on your phone. But the application itself is very limited to messages, photos and videos. You cannot send files directly to the app. You need to send through the facebook site on the web and that it is a nuisance if you don't have any computer or laptop for use. This is why I am here today to show how to send files to messenger through the use of the smartphone. All you need is a mobile / mobile data connection, the phone and the / s file you need to send. You are ready? In this case, I'm using the Google Chrome browser. It will be different depending on the browser you are using ... this option activates searches as if you use a computer. Rather fantastic..ã, you are for the website of the popular social media platform that is the messenger. You need to put your personal account in here. Like the one you are using on the app or you can use different accounts like your choice. Very easy! After the login, you could see something very similar ... and it means, you are ready to send the files! This is similar to the facebook site, how to use the computer. Just click after finding it. This option can be different depending on your phone in use. Also in this case, these features may be different for the phone, but regardless, just search for the files you are trying to send .. (Tip:. Before attempting this tutorial, ready the files on the folder that is very easy To find) After identifying the file you want, you can see this on the message area. At this point it is possible to send. And the game is done! There is no need for you to be concern about sending files. Start using this technique and send your homework, activities, projects on time! Please let me know if this blog helps you. Just leave a comment in the comments section below. If you have any questions you might think that I know the answer, don't hesitate to leave a comment, down.ã, There's a lot of ways on sending files to messenger through the mobile phone. It's just for you to choose what is best for you. a Add the following to Send-file.sh: curl x post \$ messages api url -h Authorization: to the bearer \$ JWT -h 'content-type: Application / JSON 'ID \$ ' { 'A': { 'TYPE': "Messenger", "ID": "\$ fb_recipient_id" }, "Message": { "content": { "Type": "file", "File": { "URL": "\$ file_url" } } }, "from": { "Type": "messenger", "id": "\$ fb_sender_id" } } 'View full source Run code Save the file on the machine and execute it: bash send-file.sh npm Install @ vonage / server-sdk @ beta add the following to send-file.js: const vonage = require ('@ vonage / server-sdk'); VONAGE CONST = NEW VONAGE ({apikey: vonage api key, apisetret: vonage api secret, ApplicationID: vonage application id, PrivateKey: vonage application private key path,}, {apihost: base url,}); vonage.channel.send ({type: 'messenger', ID: fb_recipient_id}, {type: 'messenger', ID: fb_sender_id}, {content: {type: 'file', the file: {url: file url,}, },}, (ERR, data) => {IF (ERR) {console.error (ERR);} Else (data.message uuid);}); View complete source Run the code Save this file on your computer and run it: Send-File.js Quick Link Share (beta) node allows you to share files directly from the Messenger window via Send Anywhere. Share Large files in Chat Room A floating icon will be displayed in the Messenger dialog. Touch the icon to select the file to share, then tap the link connection link icon Create a link. You will be redirected to the Messenger screen with an inserted connection. Once created, the link expands in 48 hours. Anyone knows that the link will be able to download the file by the expiration date. * Quick Link Share (beta) is available for the following apps: A € ã,~ "Whatsapp (Kakaotalk) A € ã,~" Viber (line) A € ã,~ "Line (line) (Whatsapp) A € ã,~ "Kakao Talk - Google Messenger A € ã,~" Google Hangouts A € ã,~ "Telegram A € ã,~" Set up Slack set up Quick Link Share (beta) You will need to change your settings to use Quick Link Share (BETA). * Required only for first use. The position of the permissions menu can vary depending on the device model. 1. Go to Menu menu> Quick Link Share (Beta), tap the accessibility button A ,, 2 . In the Accessibility Settings menu, tap Send anywhere and turn off the Activate / deactivate / A € ã,~ "button. 3. In the Messenger dialog box, please allow sends anywhere to draw other apps (or apps that may appear up). You have done! A floating icon will be displayed in the Messenger dialog. Open Send Anywhere App Press and hold the floating icon to open Send anywhere to start Start Send App. You can view the Activities menu or reshue a shared file. * You can choose which app to use in the Menu menu> Quick Link Share (Beta). If the Messenger app does not show the send icon anywhere, make sure the app is set to enabled. * Press and hold the icon to change the position of the icon. Files transfer between Windows 10 PCs to the workplace can be realized in various ways, but the most convenient options, such as message attachments or file-sharing services can be problematic if the files are very large or contain sensitive information. Large files can be allowed for email or messaging services to limit the load on their bandwidth, and security issues abound for files that are transferred to servers outside the control of a company. There is always the risk of third parties that access the copies of the files loaded by hacking or other means of subterfugi. Files transfers can be managed to keep the files within the local network of a company, but can be difficult to configure and often suffer from connection problems that are difficult to diagnose and solve. And if there was a user-friendly application messenger that works as a peer-to-peer collaboration tool on a LAN? Softros Systems has just the solution: an app called Softros LAN Messenger. It is a collaboration tool that allows team members to communicate and the attachments to send together on a protected local network or Wi-Fi connection. Below is a step-by-step guide to send files from a Windows 10 PC to another using this application. Step 1: Configure the PC The first step for our Demonstration of LAN Messenger is to select two or more Windows 10 PCs that are connected to the same local network. This could be made with an Ethernet cable to a router or a Wi-Fi connection. No matter how quickly the connection is until the two computers can communicate with each other on the local network. Step 2: Install LAN Messenger on PCs for LAN Messenger To work as a peer-to-peer application, a copy must be installed on each PC than send or receive messages. You can download a free copy of LAN Messenger test on the download page SOFTROS SYSTEMS '. Once you have obtained the downloaded installation file, run the executable file and follow the instructions in the installation wizard. After installing LAN Messenger, scan all computers in a local network and automatically creates user lists. Step 3: Sending files to a Transfer files to contacts that are set in LAN Messenger is a fairly simple task, but can be done in a couple of ways. The simplest way is to click on the contact name in the LAN Messenger contact list. A message window will open. It is therefore possible to send one or more files to drag them to the window. You can select more files or folders Drag and Drop to send a file batch into a single transfer. A second second To send files is to choose this option in a message box. You can do it by clicking on the "Send file (S)" button in the upper right corner of the message window. You will open a file selection dialog. Again, you can choose one or more file for transfer. Step 4: Broadcast file transfer How to send multiple user files At the same time the LAN Messenger 9.2 version includes a transmission file transfer function that allows files to be sent to multiple users simultaneously. Previous versions of the app support that receive files sent in this way, but are unable to send files to more than one user at a time. There are two ways to start a broadcast file transfer. You can send more files to all users in a group conversation, or you can start a transmission message from the LAN Messenger app window. If you want to transfer files using a transmission message, you can do it by right-clicking on the name of a group of users in the list of app contacts. You will see an option in the menu that appears called "Send message to group". Clicking on this option will open a "send transmission message" window. A right panel allows you to select the groups you want to include. You can type a message and drag files to the message window to add them to the transfer. By clicking "Send" will play the transmission transfer to all the groups you have chosen, and you can monitor the transfer progress by clicking the information icon above the progress bar. A similar process is used to send files to a group conversation. When creating a group conversation, you can send files to everyone by dragging files or folders to the message window. You can also select files with the "Send file (S)" button on the window toolbar. A transfer progress bar will appear for the sender and recipients and you can monitor multiple file transfer by clicking on the information icon. Step 5: Receiving files that receives a file is also a simple process. When you transfer the files, you will see a transfer progress bar for both the PC and by loading the files and the PC that is downloading it. When the progress bar indicates that the transfer is complete, you will see an "open folder" link under the bar. Clicking, open a window that allows you to view, open or copy the transferred files. Conclusion This is the basic procedure to follow when you need to share files on a local connection using LAN Messenger. We hope this guide has responded to any questions you have, but if you don't feel free to contact the Softros systems for more details. Download the trial version of LAN Messenger to try it alone and enjoy the convenience and safety of the collaboration on a local network connection. connection.
