Science inventions and discoveries pdf in tamil

The hybrid sport bike, still in its prototype phase, is a three-in-one: a pedal bicycle underestimated with a gas engine and an electric motor. But how could a gas gas bike be respectful of the environment? By Julia Laytonpeople has done (and drinking) wine for 8,000 years - which means many innovations is now and in the past, from the creation of champagne to bizarre wine labels. Becky Striepesmartphones, Tablets and other devices are not only useful; They can improve your social life. We will look at some of the newest ways to integrate social media into whatever you are doing.by Dave Roosfive metal balls on slender threads si side by side. As one in the end it affects the rest, the one on the opposite extremity stands and falls. Why doesn't the balls in the central move? A complicated.by chris schulzeveryone knows what a sandwich is. Most could also know how the snack got the name of him. But did you know who invented it? This is a hardest question to answer.by Stephanie Watsonat Once, share files between computers meant transporting a box of punching cards from one machine to another. Internet has changed everything, but who is responsible for creating this network of networks? By Jonathan StricklandThis person of different interests has also invented the cowcatcher device for trains, and held a characteristic mathematics professor at the University of Cambridge.by William Harrisit seems practically everyone has a cell phone. In fact, you probably have one in your pocket now. Many had the idea for the device, but only one could successfully present the gadget. Who was? With the headquarters of Jonathan Stricklandgoogle is located in the mountains view, California, but could also be Mount Olympus given the wild success of the company. Who is man or woman behind the mountain? By Tom Harrismany, people consider Guglielmo Marconi the inventor of the radio. After all, he got the Nobel prize for this. But others believe Nikola Tesla because the Supreme Court confirmed his patent for the invention of the radio. So who should get recognition? Of Josh Briggspeople always reflects strange things that make us laugh, like, let's say, Wafflemakers that reduce waffles in the shape of a keyboard. But these 10 inventions are not just funny; We interact with them all the time. WILLIAM HARRIS & MARIANNE SPOONTHE Grocery Bag you are carrying breaks and eggs inside SPLAT through your driveway. Yes, discharge of foodstuff can be boring, but it's nothing compared to the days before refrigeration, so take a cold drink and learn who you need to thank .by Jonathan Atterberryedison, Bell, The Wright Brothers - Sure, their inventions have Changed the world, but they don't tend to think a lot for children. But this does not mean that there were no good over the years. So take your stick Pogo and skip together to find out five of our favorites .by Jonathan Atterberry thinking about an invention means knowing what questions ask you. What problems are in front of people and what you can think of solving one of these problems. Most market products try to solve a problem. You have a headache (problem) - take an aspirin (solution). You're bored (problem) - Play a board game (solution). Once you focused on a problem, you will know what you want to invent a solution a. Think of existing solutions in a particular area of your interest or expertise and look for an unsolved problem. Here are some suggestions on how to focus your thoughts to find an idea. Brainstorming The process of the invention involves brainstorming. Think of a problem and note only to all the ideas entering your head. So look at each idea and carefully examine his Flexible flexible thinking allows you to see and consider all the possibilities. Suddenly you will watch a problem from different angles and you will see it in different ways. Critical critical thinking allows you to compare and contrast any existing existing You can also break down a problem into smaller units. This will help you to see the different aspects of a problem [source: Church] fine motor skills to hone your thoughts Try to think how many possible uses for a common object like a brick, in about ten minutes. This will give you practice in thinking of ideas in a limited space of time and help hone your thinking positive processes.Stay do not be discouraged that even if you can produce a lot of ideas, seems to take a long time to find one that would work. Remember the famous inventor Thomas Alva Edison 3500 notebooks full of ideas, at the time of his death [source: Michalko]. The pollution produced by cars, trucks and factories can be recycled as ink, cleaning the air of dangerous particulate matter and turn it into a useful product.By Jim MarionEven even if it's not even really an application, presentation of a provisional patent application, can give you a head start as you begin the process of protecting your invention.By Jane McGrathYou should not be Thomas Edison to come up with a valuable invention. But there's no need to be savvy enough to protect this invention, if you want to make money you deserve it. In other words, you need a patent.By Jane McGrathPatents are legal documents that protect your ideas and inventions, but in order to stake your claim, you first need to understand what has already been patented. What does a patent search entails? Stephanie CrawfordThere 'lot at stake when it comes to develop and sell a great idea, which is why companies are always on guard against cases of patent infringement. When it occurs, which often they end up in court. But what is it exactly? William HarrisThe difference between marketable invention and an unusual paperweights can come down if the inventor has received a patent on fine idea. But getting a patent is a complicated affair: E 'useful to have the assistance of someone who knows the details of the process. Enter the patent agent.By Thomas Moore thereâ s ĩ A A ĩ scoutÂ stationed in a new research tower Boston a few blocks from Fenway Park. But HEA ĩ s no Bill James disciple and HEA ĩ s not look for the next Red Sox pitching phenomenon. Reid Leonard is a neurobiologist, with ĩ 10 yearsâ experience as a bench scientist. The task he him is to find a Merck & Co. blockbuster drug.Heâ ĩ s one of the 12 scouts drugs Merck employs in seven countries. Last year, the scouts and their scientific teams carried out 5,000 biotech companies and schoolsÂ ĩ doctors and their findings led to 53 licensing agreements. Merck won rights to discoveries that could lead to new vaccines and antibiotics, as well as the treatments for blindness, Alzheimer's, and AIDS.Those products, of course, would share a remarkable feature: it is not so t born in laboratories MerckÂ ĩ s. Already by itself ĩ is a discovery which he calls for the giant pharmaceutical company. He is no longer able to claim all the best scientific brains, or have all the answers. With in-house research failing to produce enough new drugs to fill its pipeline and a wave of more old products coming off patent, Merck has to go out for help.ThatÂ ĩ s the emerging realities in the sector. While pharmaceutical companies Stock Still their annual reports with images of scientists in lab coats, many teams now employ as self MerckÂ ĩ ĩ Market scientists mentally assigned to find new drugs from someone Elsea laboratories. About 25% of the drugs he moved into human trials by the 10 biggest drugmakers from 2003 to 2005 were discovered by outside researchers, according to a study Tufts University. That has gone up from 15% in mid-1990s.The passage didnâ ĩ t come At Merck. Historically, the word in the scientific community was Merck people have been condescending and difficult to work, says Heather Brilliant, an analyst with the research investment company of Chicago Morningstar. Â Merck used to have an attitude of, if Wasna T created within Merck, is Wasna T worth spending time on, a recent Says.more, recent, The company has tried in good game. Â MerckÂ ĩ s GOT A new attitude! A was the title of an October Meeting of New Jersey drug-licensing executives. Leonard describes the change as a transformationÂ ĩ cultural A ĩ. It was a very deliberate process. The company has created a team dedicated to prospecting for new contacts, putting seasoned scientists at the front of the license effort. Many, like Leonard, has spent a decade or more in his merckÂ ĩ s laboratories. The Neuroscientist Margaret Beer, which explores Israel and southern Europe, helped develop the Maxalt migraine drug during his 23 years as a scientist.reps Merck need an acute eye for both scientific and commercial potential. At ENG S all over strategy and risk, to say the former Merck explorer Robert Gould. Â, how do you insert opportunities with your strategy and how much risk is willing to accept? Â ĩ They control magazines and network without stopping with industry contacts. In addition to private meetings Â ĩ
